

RESEARCH INNOVATION AND EXTENSION CELL

In higher education, research and innovation provides an integrated foundation for a college's different activities.

All research activities should ideally be designed to address -

- Demand,
- Resource diversification,
- Dynamic and lifelong learning needs,
- Leveraging information and communication technology (ICT)

to improve networking and social engagement, both with the economic sector and the general public.

The alignment of all faculty members with current research demands is critical to the success of a college learning.

As a result, the current research policy is to assist the college faculty in achieving excellence in contribution of skill-oriented higher education so that industry and society both get benefitted.

Objectives

This policy establishes a comprehensive framework for guiding and ensuring academic research integrity among teachers and students.

The policy's goals are as follows -

- Encourage research and innovation,
- Ensure research integrity, quality, and ethics,
- Integrate teaching and research.

Promotion of Research

The college Research Cell have been charged with the task of creating a suitable research environment. Based on the scholarly and educational advantages of the planned research, the research needs must be matched with the available resources, such as funds, space, facilities, and other resources. It will also provide opportunity for researchers to gain experience in writing research proposals and reports, publications, and intellectual property rights, among other things.

Identification of Thrust Areas

Despite the fact that academics are free to choose their own study topics, the Shri GPM Degree college research committee will examine all research proposals for their social relevance. The Research Cell collaborates with various subject instructors to develop a list of research subjects on which they might concentrate their efforts. In addition, the Research Cell works closely with a variety of stakeholders, including students, academics, and industry professionals, to identify pressing challenges that require immediate attention.

As a result, the research cell keeps its list of research ideas, areas, and topics up to date and distributes them with students and professors.

Training for Research and Publications

Shri G.P.M. degree college encourages sharing of expertise within and among the neighbouring colleges of higher learning to publish research papers and channelize their efforts, in addition to stimulating research temperament.

The Research Cell provides a separate and private forum for students to present and be rewarded for their research efforts. The research is considered for publication after it has been evaluated.
